New antibodies that bind to CD33, useful for treating a disease associated with CD33 expression, such as myelodysplastic syndrome, acute or chronic myeloid leukemia.

Claim 14; SEQ ID NO 10; 124pp; English.

The present invention describes an isolated anti-CD33 antibody or its epitope-binding fragment comprising: (a) at least one complementarity-determining region (CDR); or (b) at least heavy chain variable region comprising 3 CDRs, and at least one light chain variable region, where the CDR has the ability to bind CD33. Also described: (1) an immunoconjugate comprising the antibody or its epitope-binding fragment linked to a drug or prodrug; (2) a composition comprising the antibody or

N-PSDB; ADO32139.

```
composition comprising the immunoconjugate, composition or the antibody defined above, or its epitope-binding fragment, and a pharmaceutical agent; (4) a diagnostic reagent comprising the antibody defined above, where the antibody or antibody fragment is labelled; (5) inhibiting the defined antibody or antibody fragment is labelled; (5) inhibiting the growth of a cell expressing CD33 by contacting the cell with the above of defined antibody or its epitope-binding fragment, immunoconjugate, or (pharmaceutical) composition; (6) determining whether a biological sample contains a myelogenous cancer cell; (7) an improved antibody or its optiope-binding fragment that specifically binds to CD33; (8) an isolated polymucleotide encoding the antibody or its epitope-binding fragment to polymucleotide encoding a light or heavy chain of the antibody defined above or its epitope-binding fragment of a recombinant vector comprising the polymucleotide, (11) a host cell transformed with the recombinant vector; (12) producing an antibody or a recombinant vector comprising the ability to bind CD33; and (13) cobtaining CD33 from a biological material. The antibody or its epitope-binding fragment, (10) cobtaining CD33 from a biological material captore-binding fragment, or immunoconjugate, composition can be used for treating a subject having a disease where CD33 is expressed, such as myelodysplastic syndrome, acute myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia, and for in vivo imaging or as affinity purification agents. The present composition which is used in an example from the present composition which is used in an example from the present
epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nvention.

The present invention relates to the screening of candidate molecules [anti-transforming growth factor (TGF)-beta antibodies] for the treatment core (anti-transforming growth factor (TGF)-beta antibodies] for the treatment core (at the invention involves administering several test screening method of the invention involves administering several test substances to a non-human syngeneic immunocompetent animal model bearing at least one soft tissue or bone metastasis optionally in presence of a primary tumor, determining the effects of these test substances on the soft tissue or bone metastasis and growth of the primary tumor and identifying a test substance inhibiting soft tissue growth or bone metastasis without adverse effect on the status of the primary tumor. The invention is useful in the diagnosis and treatment of breast cancer, colorectal cancer, liver and lung metastases, bone destruction and bone colorectal cancer, liver and lung metastases, bone destruction and bone colorectal cancer, liver and lung metastases, bone destruction and bone colorectal cancer, liver and lung metastases, bone destruction and bone colorectal cancer, liver and lung metastases, bone destruction and bone colorectal cancer, liver and lung metastases, bone destruction and bone colorectal cancer. The prophylaxis or treatment of soft tissue and/or bone metastases which may additionally be effective in treating the primary tumor. The present sequence is murine anti-TGF-beta antibody cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Screening compounds useful for treating tumor metastasis involves administering a test compound to non-human animal model bearing soft tissue/bone metastasis and identifying compound that inhibits soft tissue
                                                                                                                   Monoclonal antibody, animal disease model, metastasis, cytostatic, neoplasm, bone metastases, breast tumor, colorectal tumor, bone disease, osteopathic, antibody therapy, radiation therapy, immunotherapy; cancer cell proliferation inhibitor;

The present invention relates to the screening of candidate molecules [anti-transforming growth factor (TGF)-beta antibodies] for the treatment of funci metastasis and treatment methods using such molecules. The screening method of the invention involves administering several test substances to a non-human syngeneic immunocompetent animal model bearing at least one soft tissue or bone metastasis optionally in presence of a primary tumor, determining the effects of these test substances on the soft tissue or bone metastasis and growth of the primary tumor and identifying a test substance inhibiting soft tissue growth or bone metastasis without adverse effect on the status of the primary tumor. The invention is useful in the diagnosis and treatment of breast cancer, colorectal cancer, liver and lung metastases, bone destruction and bone lubstances useful for the present invention is useful to screen substances useful for the present extreatment of soft tissue and/or bone metastases which may additionally be effective in treating the growth factor-beta (anti-TGF-beta) antibody (also referred as humanized munine anti-transforming growth factor-beta (anti-TGF-beta) antibody (also referred as humanized munine anti-transforming monoclonal antibody 2G7) chimeric protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Screening compounds useful for treating tumor metastasis involves administering a test compound to non-human animal model bearing soft tissue/bone metastasis and identifying compound that inhibits soft tissue growth/bone metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neoplasm; bone metastases; breast tumor; colorectal tumor; bone disease; osteopathic; antibody therapy; radiation therapy; immunotherapy; cancer cell proliferation inhibitor; transforming growth factor-beta-antagonist; humanized antibody; chimeric antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Humanized antibodies (hAbs) for IgG Fc receptors on human phagocytes comprise the CDR of mouse monoclonal antibody 22 (from hybridoma 022WCL-1), VH chains from human Igs NEWM or KDL, and VK chains from Ig REI. Sequences are provided for mouse 022 VH (AAR54931), humanized NEWH-based VH (022 NWVH, AAR54929), humanized KDL- based VH (022 KLVH, AAR54930), buring hab production, VH and VK CDNAs were PCR amplified using primers given in AAQ65378-87. Mutagenesis of clone M13VHPCR2 KOL VH (L71R) was heteroantibody, bifunctional antibody and immunotoxin production.

The invention is useful in the fields of cancer biology and immunotherapy, in particular for diagnosing and treating mallignancies such as melanoma, breast cancer or hepatocellular carcinoma. The present sequence is the mouse anti-SMS-1 antibody light chain variable (VL) region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antibody competitively inhibiting immunospecific binding of a human SMS-1 specific monoclonal antibody to a SMS-1 target antigen, useful in treating malignancies such as melanoma, breast cancer or hepatocellular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to antibodies which are specific for the cancer associated antigen SM5-1. The antibodies are useful for assaying for SM5-1 antigen in a sample, which is useful for the prognosis or diagnosis of a neoplasm, e.g. melanoma, breast cancer, or heptcocallular carcinoma. The present sequence is a variable region of one such anti-SM5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61

Antibody engineering; chimeric antibody; cytostatic; gene therapy; vaccine; gastrointestinal disease; immune response; melanoma; malignancy; breast cancer; hepatocellular carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel chimeric protein comprising an Flt3 ligand, or its biological fragment, and a proteinuous or peptidyl trumoricidal agent. The invention may be useful for the production of compounds with a cytostatic activity or a vaccine. The composition and methods are useful for preventing or treating neoplastic conditions, such as melanoma, breast cancer or hepatocellular carcinoma. The present sequence is that of a protein which is related to the chimeric proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New chimeric protein for preventing or treating neoplastic conditions, e.g. melanoma, breast cancer or hepatocellular carcinoma, comprises an Flt3 ligand or its fragment, and a proteinuous or peptidyl tumoricidal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      22 IMMTQSPSSLAVSAGEKVTMSCKSSQSVLYSSNQKNYLAWYQOKPGQSPKLLIYWASTRE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IVLTQSPGSLAVSPGERVTMSCKSSQSVFFSSSQKNYLAWYQQIPGQSPRLLIYWASTRE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a chimeric protein having a Flt3 ligand (FL) or its biologically active fragment and a proteinuous or peptidyl tumoricidal agent. The invention is useful for treating malignancy, neoplasm e.g. melanoma, breast cancer, hepstocellular carcinoma and as a vaccine for eliciting an immune response. The invention is also useful in gene therapy. The present sequence is the mouse SM5-1 (mSM5-1) light chain variable region protein.
                                                                           Antibody engineering; chimeric antibody; cytostatic; gene therapy; vaccine; gastrointestinal disease; immune response; melanoma; malignancy; breast cancer; hepatocellular carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61

This invention relates to a novel chimeric protein comprising an Flt3 ligand, or its biological fragment, and a proteinuous or peptidyl tumoricidal agent. The invention may be useful for the production of compounds with a cytostatic activity or a vaccine. The composition and methods are useful for preventing or treating neoplastic conditions, such as melanoma, breast cancer or hepatocellular carcinoma. The present sequence is that of a protein which is related to the chimeric proteins of the invention. Note: Two sequences were allocated this SeqID number in the specification, the alternative sequence is shown on page 21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antibody engineering; chimeric antibody; cytostatic; gene therapy; vaccine; gastrointestinal disease; immune response; melanoma; malignancy; breast cancer; hepatocellular carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2 IVLTQSPGSLAVSPGERVTMSCKSSQSVFFSSSQKNYLAWYQQIPGQSPRLLIYWASTRE 61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New chimeric protein for preventing or treating neoplastic conditions, e.g. melanoma, breast cancer or hepatocellular carcinoma, comprises an Flt3 ligand or its fragment, and a proteinuous or peptidyl tumoricidal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a chimeric protein having a Flt3 ligand (FL) or its biologically active fragment and a proteinuous or peptidyl funoxicidal agent. The invention is useful for treating malignancy, neoplasm e.g. melanoma, breast cancer, hepatocellular carcinoma and as a vaccine for eliciting an immune response. The invention is also useful in gene therapy. The present sequence is the SM5-1 chimeric antibody (ChSM)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               a.ü
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a chimeric protein having a Flt3 ligand (FL) or its biologically active fragment and a proteinuous or peptidyl tumoricidal agent. The invention is useful for treating malignancy, neoplasm e.g. melanoma, breast cancer, hepatocellular carcinoma and as vaccine for eliciting an immune response. The invention is also useful in gene therapy. The present sequence is the FL/Fc/chSMFv fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New chimeric protein comprises an Flt3 ligand and a proteinuous or peptidyl tumoricidal agent, useful for treating malignancy or neoplasm, e.g. melanoma, breast cancer, or hepatocellular carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 IVLTQSPGSLAVSPGERVTMSCKSSQSVFFSSSQKNYLAWYQQIPGQSPRLLIYWASTRE

```

```
This invention relates to a novel chimeric protein comprising an Flt3 ligand, or its biological fragment, and a proteinuous or peptidyl tumoricidal agent. The invention may be useful for the production of compounds with a cytostatic activity or a vaccine. The composition and methods are useful for preventing or treating neoplastic conditions, as melanoma, breast cancer or hepatocellular carcinoma. The present sequence is that of a protein which is related to the chimeric proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    550 IMMTQSPSSLAVSAGEKVTMSCKSSQSVLYSSNQKNYLAWYQQKPGQSPKLLIYWASTRE 609

The invention relates to monoclonal antibody which binds the clumping factor A (ClfA) protein from Staphylococcus aureus. The anti-clfA monoclonal antibody is useful for treating or preventing S. aureus infection in a human or animal, and for inhibiting the binding of staphylococcal bacteria to fibrinogen or fibrin. The immunogenic fragment S. aureus Clf40 protein, S. aureus Clf31 protein, or the S. aureus N3 protein is useful for inducing an immunological response in a human or animal. These staphylococcal infections include wound infections, sepsis, impetigo, furuncles, premenonia, septic archritis or endocarditis. The present sequence is Staphylococcus aureus ClfA specific monoclonal antibody 12-9VLA-1 (variable light sequence) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                         New anti- clumping factor A (ClfA) monoclonal antibody, useful for treating or preventing Staphylococcus aureus infection e.g. wound infections, impetigo, furuncles, pneumonia, septic arthritis or sepsis in a human or animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match 86.9%; Score 509; DB 5; Length 112; Best Local Similarity 87.4%; Pred. Submitted (AUG-1996) to Swiss-Prot.
-1- MISCELLANEOUS: The C region of this chain has the INV (3) marker.
-1- MISCELLANEOUS: This is a Bence-Jones protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PDB; IEEG; X-ray; A/B=1-114.

TITLE OF INVENTION: IMMUNOCONJUGATES AND HUMANIZED
TITLE OF INVENTION: ANTIBODIES SPECIFIC FOR B-CELL LYMPHOMA AND LEUKEMIA CELLS
NUMBER OF SEQUENCES: 21
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: PCT/US95/09641
FILING DATE: 11-AUG-1995
PRIOR APPLICATION NUMBER: US 08/289,576
FILING DATE: 11-AUG-1995
FILING DATE: 11-AUG-1995
FILING DATE: 11-AUG-1995
SEQUENCE CHARACTERISTICS:
LENGTH: 113 amino acids

"WUDE: AUG-1997
INFORMATION FOR SEQ ID NO: 6:
ESCUENCE CHARACTERISTICS:
LENGTH: 113 amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Patent No. 6270765

GENERAL INFORMATION:

APPLICANT: Yashwart M. Deo

APPLICANT: Ocol Goldstein

APPLICANT: Cheziano

APPLICANT: Cheziano

TITLE OF INVENTION: THERAPEUTIC COMPOUNDS COMPRISED

TITLE OF INVENTION: OF ANTI-FC RECEPTOR ANTIBODIES

VOMBERSPONDENCES: 16

CORRESPONDENCE ADDRESS:

ADDRESSEE: LAHIVE & COCKFIELD

STREET: 60 State Street, Suite 510
                                                                                                                              GENERAL INFORMATION:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 25, 1

GENERAL INFORMATION.

APPLICANT: Fraunhofer Gesellschaft zur F"rderung der angewandten Forschung e.V.

APPLICANT: Fraunhofer Gesellschaft zur F"rderung der angewandten Forschung e.V.

TITLE OF INVENTION: Antibodies, recombinant antibodies, recombinant

TITLE OF INVENTION: antibody fragments and fusions mediated plant disease

TITLE OF INVENTION: resistance against fungi

FILE REFERENCE: 3581.01US01

CURRENT APPLICATION NUMBER: US/10/512,184

CURRENT FILING DATE: 2004-10-22

NUMBER OF SEQ ID NOS: 72

SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 EIVLTQSPGSLAVSPGERVTMSCKSSQSVFFSSSQKNYLAWYQQIPGQSPRLLIYWASTR 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INFORMATION:
APPLICANT: Fraunhofer Gesellschaft zur F"rderung der angewandten Forschung e.V.
TITLE OF INVENTION: Antibodies, recombinant antibodies, recombinant
TITLE OF INVENTION: antibody fragments and fusions mediated plant disease
TITLE OF INVENTION: resistance against fungi
FILE REFERENCE: 3581.01US01
CURRENT APPLICATION NUMBER: US/10/512,184
CURRENT FILING DATE: 2004-10-22
NUMBER OF SEQ ID NOS: 72
